

CUCUMBER GARDEN PROJECT

You will need:

- Cardboard Egg Carton
- Potting Soil
- Cucumber Seeds
- Spray Bottle
- Scissors
- Garden Trowel
- Outside location for planting or garden pots

1 Prepare the planter
Cut egg carton in half. Add potting soil to individual egg cups in carton.

2 Moisten the soil
Spray soil with water. Place on tray and take indoors.

3 Add seeds
Poke a hole in the center of each cup. Place one seed in the hole. Cover with soil.

4 Place in the soil
Dig a hole in the container you are transferring to, using your trowel. Place the egg carton cup directly in the soil. It will decompose. Water your seedling!

5 Water and wait
Keep the egg carton in a warm light filed location until they begin to sprout. Make sure to water seeds everyday. The soil should stay very moist. Once they look like the middle carton of seedlings in the picture below, they are ready to transfer.

6 Transfer to a permeant location. Make sure the egg carton is very wet and saturated before moving the seedling outdoors. Tear off one of the egg carton cups.
